

At Year's Half, Options Trading System Yields Over 120% on NASDAQ and 72% on S&P 500 Trades Using MarketVolume.com Charts and Indicators

Returns even larger when calculated for the year rolling.

Vancouver, B.C. ([PRWEB](#)) July 10, 2007 -- Highlight Investments, which provides investors with proprietary trade volume analysis for all U.S. equity markets, announced today the half-year performance of its index Options Trading System or OTS (www.qqq-options-trading.com). Using the system, traders earned 120.6% since January and 193.7% for the year rolling trading options on the QQQQ. For the S&P 500 index (SPY exchange-traded fund), traders using the system earned 72.4% and 164.9%, respectively, over the same period.

OTS collects volume data for all U.S. indexes and exchanges from Highlight Investments' MarketVolume.com, thoroughly analyzes these data, and delivers clear, simple-to-use indicators to its index options trading clients for profitable returns.

"With comprehensive market volume analysis that gauges all volume on these indexes and compares it to historical thresholds, trading options on indexes can become hugely successful," said Vlad Korzinin, President and CEO of MarketVolume.com. "Volume surges to the up or downside precede price movements in a fairly predictable manner. We are gratified that our clients recognize and have profited from this."

Continued Korzinin, "Not long after the OTS Team began using MarketVolume.com's proprietary technologies, it became apparent that our volume indicators are being recognized and are valuable not only to retail traders, but to professional services as well."

OTS recommends entry and exit prices for index options trades with two-to-three month expiration dates only. The average number of trades for 2007 is 14 for the Q's and 10 for the SPY. Over the past 12 months, the system's accuracy has been 71% for options trading on the Q's and 86% on the SPY. More information is available at: http://www.qqq-options-trading.com/signals_QQQQstat.asp

Trading clients of Highlight Investments' Options Trading System or OTS also auto-trade with brokers such as thinkorswim®, optionsXpress® and other online executing services. The system's trade alerts also are independently monitored by Pro-Trading-Profits, a third-party monitoring service.

About OTS

Highlight Investment's Options Trading System provides its clients with timely alerts for trading options on the QQQQ and SPY exchange-traded index funds using www.MarketVolume.com proprietary volume indicators. In 2005 and 2007, Highlight Investments' OTS was recognized by Technical Analysis of Stocks & Commodities Magazine in its Readers Choice awards. About MarketVolume.com

Over a decade in development, MarketVolume.com is the single source for real time market volume data presented in conjunction with volume advances and declines of any index or basket of securities or instruments over any number of time horizons. Its real time measurement of volume surges in all major indexes -- when combined with its modulation technology; its comprehensive, instantly accessed library of historical volume activity; and volatility indicators -- provides individual traders, institutional traders, hedge funds and managed-account businesses with extraordinarily quick and accurate views of market sentiment and direction that are historically demonstrable.

MarketVolume.com demonstrates that all price movements -- in either direction -- are preceded by high market volume activity. This has provided traders with a powerful means of reading the market's sentiment in a timely and productive way. MarketVolume.com also provides its technology on a custom basis to asset managers that create baskets of securities or other instruments for program trading. MarketVolume.com is not a money manager and does not trade for clients. For more information, visit www.marketvolume.com.
